SUMMER 2018

MINECRAFT CLUB

We have a new club! Students get to experiment with buildings and making structures. There are lots of interactive systems which you can use to make something extraordinary. Students can play with others in randomly generated worlds. Mr Heer will teach you the mechanics and how to play safely. The students can have lots of fun with learning the basics of Minecraft. The pupils will eventually learn how to do advanced commands, assisted by Mr Heer as well as their peers. There is also a combat aspect and crafting that they can learn about. The combat is what really entices children into playing the game, as there are different enemies to battle and bosses to conquer. You can craft different items to create a masterpiece that will amaze people. It started in April and it will finish at the end of July.

Meet our digital leaders!

Online Safety

Fishing is a scam where they keep spamming you with unwanted messages and if you open one of their messages it will infect your computer with a virus. Before you delete all of them look at them carefully to

see if they're good or bad messages. Don't talk to strangers because they could be rude and ask you to meet up in real life. You can't always trust people online as they can scam you by asking for money to help them even when they don't need help. Some kids (little kids) sometimes get upset by seeing a scary advert. If this ever happens to you, you should tell a trusted adult like teachers parents etc.

Pupils can play safe games for example, DB primary games, which are great as they are fully secure and they can have fun as well as education. We have been learning about E-safety and we have been playing an educational version of Minecraft. We have also been doing online safety quizzes.
